

Dihydrospinosyn A aglycone

Code No.: **BIA-D1599**

Pack sizes: **0.5 mg, 2.5 mg**

Synonyms :

Specifications

CAS #	: 727695-12-7
Molecular Formula	: C ₂₄ H ₃₆ O ₅
Molecular Weight	: 404.5
Source	: Semi-synthetic
Appearance	: White solid
Purity	: >95% by HPLC
Long Term Storage	: -20°C
Solubility	: Soluble in ethanol, methanol, DMF or DMSO.

Application Notes

Dihydrospinosyn A aglycone is an acid degradation product produced by hydrolysis of both saccharide groups of 3'-ethoxy-5,6-dihydrospinosyn J, the major component of the commercial insecticide, Spinetoram. Dihydrospinosyn A aglycone is only weakly active as an insecticide as the saccharides are considered essential for potent activity. Despite the importance of spinosyns as agro-chemical insecticides, there are few published reports of the biological activity or the levels of dihydrospinosyn A aglycone in the environment.
