

Dihydroavermectin B1a

Code: **BIA-D1119**

Pack sizes: **1.0 mg, 5.0 mg**

Synonyms : **Ivermectin, Ivermectin B1a, 22, 23-Dihydro-avermectin B1a**

Specifications

CAS # : **70161-11-4**
Molecular Formula : **C₄₈H₇₄O₁₄**
Molecular Weight : **875.1**
Source : ***Streptomyces avermitilis* MST-AS4526, semi-synthetic**
Appearance : **White solid**
Purity : **>95% by HPLC**
Long Term Storage : **-20°C**
Solubility : **Soluble in ethanol, methanol, DMF or DMSO.**

Application Notes

Dihydroavermectin B1a is the major component (>80%) of the commercial anthelmintic, ivermectin. Members of the avermectin/milbemycin anthelmintic class exert their anthelmintic effects by binding to glutamate-gated chloride channels expressed on nematode neurones and pharyngeal muscle cells. The avermectins and milbemycins are also potent insecticides. The individual 25-sec-butyl (B1a) and 25-isopropyl (B1b) components of ivermectin have received little separate study.
