### Application Notes

Diacetylcercosporin is a minor hydrophobic analogue of cercosporin produced by several species of the fungal genera, *Cercospora* and *Septoria*. Diacetylcercosporin has moderate in vitro activity against *Leishmania* and chloroquine-sensitive strains of *Plasmodium falciparum*. Diacetylcercosporin exhibits antitumor activity. Like other perylenequinones, the biological activity of diacetylcercosporin is significantly enhanced on light-activation.
